

Concept of Operations

writer comments: To get an idea I just started naming off what I have in my notes

ranking system example (3) ==> 1 lowest priority , 5 highest priority

What we know:

1. We will be using an embedded browser to display the videos from
 - a. YouTube(5)
 - b. Vimeo(4)
2. We will be storing local videos(3)
 - a. this will require a video database
3. Possible integration with sling.com(1)
4. The first time viewing of the video will store the details of the video(4)
 - a. this will require a info database
5. We can use our own accounts or let users login with facebook/google(2)
6. Be able to pause a video at any one moment and place one of many kinds of TAG's(4)
7. We have a set of predefined TAG's to choose from(4)
 - a. comment TAG
 - i. just a comment (text) at a specified time(like youtube)
 - b. Photo TAG
 - i. add a photo to the TAG area
 - c. Profile TAG
 - i. a social networking link to a point in the video
 - d. Product TAG
 - i. used to add a link to a product's web site (of course a product in the video) -- (How do we do a check for this???)
 - e. Location TAG
 - i. a link to a map with the location of the video's content
8. Be able to change the list of TAGs (we don't really know who yet)(3)
9. We need to be able to filter a set of tags that are on a video within friends circle.(3)
10. Mobile compatibility:
 - a. Watch videos with tags from mobile devices(2)

Backlogs:

1. Tag videos from mobile devices.
2. Auto tagging of videos through image recognition.
