

## Initial Requirements Document

### Video Tag Portal

1. Play the videos within a web application and should be browser independent.
2. Portal should support multiple video sources like YouTube and Vimeo.
3. Make the application have the ability to play local videos.
4. The first time viewing of the video should store all the information of the video that is being played.
5. Design some kind of login system OR Integrate with Facebook/Google to manage user accounts and friends.
6. We need to be able to pause a video at any one moment and place one of many kinds of tags.
7. We would have a set of predefined Tags to choose from which includes tagging:
  - a. Photo's
  - b. Facebook/Google+ profiles.
  - c. Maps.
  - d. Website Links
  - e. Comments.
8. Need to have the ability add/remove the list of tags for future developers.
9. We need to set up a filter system for users to filter out tags placed on a video.
